

COMPETENCY CLOUD

Let's all
get home safely,
every day

The ability to ensure that those on site have the correct competencies and that these are in date at the time of works is a critical part of putting operatives to work. Although all companies run a training matrix of sorts this information is not easily disseminated to the supervisor tasking individuals on site to working activities.

JFH have adopted a QR code system that is displayed on the operatives' hard hat. This code is issued at induction and when scanned with a mobile device will display all the operatives' competencies such as CSCS, CPCS, IPAF, working at height, and face fit testing and the expiry dates of these.

The QR code is linked to the company cloud-based training matrix. The matrix itself has additional features such as when competencies are uploaded this will automatically be cross referenced with the CITB card checker providing protection from fraudulent documents.

JFH have integrated the use of this QR code system into the daily activity briefing in such that the supervisor will check competencies via the QR code as operatives are tasked off to perform their specific roles for the day.

Works are currently ongoing to integrate TBTs, and RAMS briefings into this system to further improve the onsite visibility of these records for site supervisors.

As a result of this JFH have recorded no non-conformances regarding training through their ongoing audit and inspection regime since the launch of this system.

COMPETENCY CLOUD

Let's all
get home safely,
every day

Information is read on any smart device and is fully in line with GDPR regulations.

QR code displayed on operatives hard hat links directly to JFH training database

COMPETENCY CLOUD

Let's all
get home safely,
every day

Online competency tracking platform

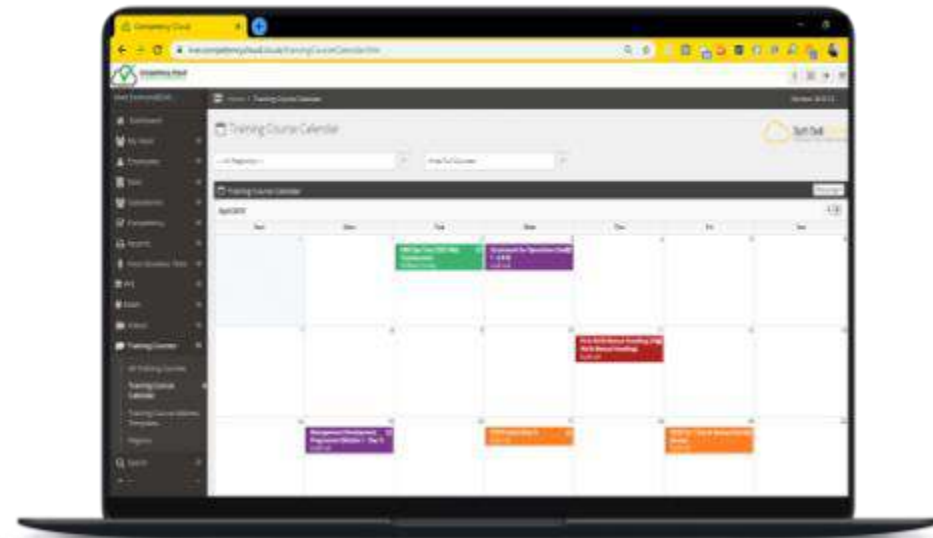

Records all major competencies

Automatically checks competencies against CITB, CSCS and other bodies database to confirm authenticity.

Capable of recording in house briefing such as RAMS, TBT, and inhouse training workshops.

Assigns each operative a unique QR code so that their information can be easily checked and tracked.

Provides dash boards and expiry alerts to project teams

John F Hunt Ltd

QR CODE FUNCTION

Let's all
get home safely,
every day

STAGE 1

Operatives are logged onto system and issued with a personal QR code stickers at induction.

STAGE 2

QR code can be scanned by any smart phone camera with no additional required software..

STAGE 3

Personal QR code will link users to all training details whilst remaining compliant with GDPR

SAFETY BENEFITS

Let's all
get home safely,
every day

Clear training records maintained at all times and easily accessible to project teams

Allows Supervisor to confirm training of individuals within their team prior to assigning tasks and roles via QR code system.

Allows for easy on site audit and check of training competencies via QR codes.

Moves training files out of the office and into the hands of those supervisors on site controlling the workforce.
